

Report for Task 2 - Information and Analysis of the Test Object

Name of the tested application: Warsaw Sneaker Store

Date of report creation: 23-11-2022

Author: Paweł Kurzydło

Link to the application: <https://warsawsneakerstore.com/>

List of partner stores:

<https://worldbox.pl/>

<https://sklepbiegacza.pl/>

<https://sportowysklep.pl/>

<https://butydlamalucha.pl/>

<https://skstore.eu/pl>

Source of potential documentation:

<https://www.sote.pl/docs/dokumentacja>

In terms of usability, the website is really clear and easy to use, and all the elements of the site are easily accessible. The site has all the necessary features such as quick registration, login, cart, sitemap, product categorization, filtering, sorting, etc. Additionally, the feature added to the site in the form of a blog is a great idea that will further attract the customer's attention, making them stay on the site longer.

Regarding performance, when using the Safari browser, after launching the developer tool, the timeline section showed that the page loading time was less than 3.55s, which I consider to be a result that meets the requirements of today's user.

Regarding the use of documentation for further testing of the site, I will treat it as a help in the technical analysis of individual functionalities and modules. Although I think it can shed some light on the functioning according to the requirements, I believe it will be useful to a minimal extent.

Referring to the information contained in the regulations, in my opinion, the elements worth checking and subjecting to further testing are:

Store Cart - a service provided by the Seller electronically, allowing the Customer to place an Order, in particular by remembering selected Products (also after the end of the browser session).

Product - a movable item intended for sale in the Online Store.

Personalized product - a non-prefabricated product produced according to the specifications of the customer or serving to satisfy their individual needs.

Online store - an e-commerce platform operated by the Seller at the internet address <https://warsawsneakerstore.com> (including subpages).

The Favorites service allows the customer to observe selected Products without the need to search for them every time within the Online Store. The Favorites service is a one-time service. Using the Favorites service starts with clicking the heart symbol on the Product card (adding the first Product) and ends with removing the last Product from those observed within the service (by clicking the trash can symbol).
