

Task 13 - Quality confirmation
 Report creation date: 28.12.2022
 Author: Paweł Kurzydło

WORKS					
Registration	Logging in	Payments	Favorites	Profile	Store cart
	Improvement with an additional message when there is an incorrect login in the pop-up window and a time lockout after several unsuccessful login attempts.				

LITTLE PROBLEMS				
Premiere calendar	Jordan section	Home page	Categorization	Captcha
Functionality	Usability	Usability	Functionality	Functionality
The sold-out product appears as available for purchase	Issues with displaying the store's logo	Problem with displaying social media icons on the Safari mobile browser.	The store displays products from a different category than the one selected by the user	When adding a double limited pair to the cart, the captcha does not refresh immediately after an error occurs
	Incorrect information about product launches			

To sum up, the greatest quality of the application is its foundation and functionality, which fulfills its business role by allowing potential users to achieve the goal of placing an order. Despite minor cosmetic problems with the display of icons or small elements, the application simply works well during most sessions. If we want to improve the quality of the application, we should definitely verify the captcha and focus on fixing minor functional defects that sometimes occur but do not disrupt the user experience.
