Task 21 - Performing and reporting exploratory tests
Report creation date: 22.01.2023
Name of the tested application: https://warsawsneakerstore.com/
Author: Paweł Kurzydło

STATUTE

Exploratory testing - https://www.coingecko.com

AREA

Main functionalities of the application

OS | macOS Monterey 12.6

STRATEGY

Exploration and learning of the main elements of the application

START - 22.01.2023 11:00

TESTER - Kurzydło Paweł

TASK DISTRIBUTION:

Analysis and learning of the application

Test design

Test execution

Report

DURATION - 60 minutes

TEST DESIGN AND EXECUTION - 20 minutes

DEFECT ANALYSIS AND REPORTING - 30 minutes

SESSION PREPARATION - 10 minutes

RISKS:
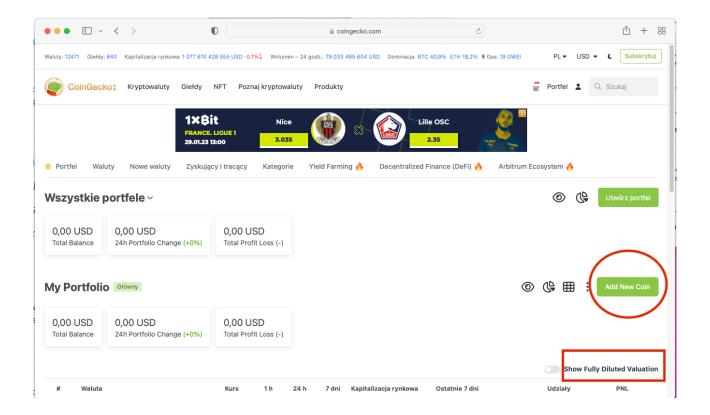

- Errors in tracking current currency exchange rates

- Possible defects in new modules added to the application

- Defects related to translation

TEST NOTES:

The exploration and learning of the basic functions of the application were largely achieved within the designated time. There were also defects, but the website functions adequately.

DEFECTS:

1. When logging into the application, there is an error in the translation in the portfolio section (this occurs in every language)

2. Automatic language change when entering the portfolio.

3. The cryptocurrency converter does not have a limit on the number of digits entered in the quantity form.

TOPICS:

1. Why do translation errors occur not only in the reported area (see the section New Cryptocurrencies and Categories - Last Added/Last 7 Days)

2. Is reported defect #3 actually a defect? The application mainly operates on numbers, and sometimes these are large results, so theoretically the limit requirement may not have been taken into account.
