Task 26 - Executing retest
Report creation date: 31.01.2023
Name of the tested application: https://warsawsneakerstore.com/
Author: Paweł Kurzydło

When conducting retests, I will use defect reports from previous tasks. The report will be in the form of a list of reported defects with their status indicating whether a given defect has been fixed or not, along with any justification if necessary.

1. Sold out product appears as available for purchase in the new releases calendar - **Partially fixed**

Justification - The product still appears as available for purchase, but when clicked, a message is displayed saying: "Product not found. We recommend other products from the same category", displaying products from the same brand. When the defect was reported, the page did not display any message.

2. Website logo does not display and incorrect information about new releases in the https://jordan.warsawsneakerstore.com environment - **Not fixed**

3. Incorrect categorization of products on the website - **Not fixed**

4. Social media icons not displaying on the homepage at the bottom of the page (Safari mobile browser) - **Not fixed**

5. Defect related to refreshing Captcha at the appropriate time - **Not fixed**

6. Problem with requests when increasing or decreasing the quantity of products multiple times in the cart - **Not fixed**

A new defect appeared during retesting:

When displaying products in the "Winter sale" category and applying price filtering, the page displays all products instead of products from the sale.

In summary, regarding the defects described by me above, in my opinion, they do not reach the creators nor are they verified in any way because the website still struggles with the defects that I reported at the beginning. Furthermore, there is still a problem with requests.
